Members of the Legislature of the State of Minnesota:

– THE REPORT IN BRIEF –

The Minnesota State Board of Investment manages many State funds for various constituents. The trust funds, retirement funds, highway funds, endowment funds and the Treasurer's general account all involve individual statutes and policies. The paragraphs following this introduction detail the Board activities and investment objectives. A complete listing of all securities transactions during fiscal 1977 is found starting on page 51. A resume is provided as to the reasons for placing business with various securities firms.

WHAT IS THE SIZE OF THE MINNESOTA STATE FUNDS?

On June 30, 1977, Minnesota's total investment portfolio amounted to \$3,313,580,190.00. Of this amount, \$269,031,044.00 represented the permanent trust funds invested for the benefit of school students. Total retirement and welfare funds amounted to \$2,078,660,779.00. Many other individual accounts, including the Invested Treasurer's Cash Fund, three constitutionally dedicated highway funds, the proceeds from various bond sales, and numerous endowments and departmental accounts comprised the remaining \$965,888,367.00. It has been estimated that the State Board of Investment handles approximately 80 to 100 accounts, some amounting to hundreds of millions of dollars and others representing small bequests by individuals for educational or welfare institutions.

TO WHAT EXTENT ARE THE INVESTMENTS DIVERSIFIED?

Statutes require that the funds be invested appropriately for the needs of the individual accounts. For example, the Invested Treasurer's Cash Fund, the current tax receipts, is invested entirely in short-term money market instruments – obligations of the U.S. Treasury and agencies or short-term notes of corporations. Short-term interest rates have fluctuated widely, from over 12% in late 1974 to less than 5% during fiscal 1977.

The Permanent School Fund is held for perpetuity with the income allocated to educational needs. This fund may participate in equities to the extent of 20% of the book value; 40% may be invested in corporate bonds; and the balance is invested in U.S. Treasury and agency obligations.

The various retirement funds are invested in accordance with individual statutes. Equity participations generally vary from 40% to 50%. One account which meets specialized retirement needs is invested entirely in common stocks; others emphasize fixed-income securities; one is wholly invested in bonds. The investments authorized for these various funds, as well as the actual portfolios, are listed in the main body of this report, and illustrated by the following charts.

*OTHER RETIREMENT FUNDS INCLUDE: HIGHWAY PATROLMEN'S RETIREMENT FUND, PUBLIC EMPLOYEES POLICE AND FIRE FUND, JUDGES RETIREMENT FUND, AND MINNESOTA VARIABLE ANNUITY FUND.

WHAT WAS THE ACTUAL RATE OF RETURN, OR YIELD, RECEIVED BY THE VARIOUS FUNDS DURING FISCAL 1977?

The rate of return is sometimes computed to include the gains and losses in securities prices. Wide variations in annual yield result from combining price fluctuations with dividend and interest income. It may be more appropriate to consider the actual income to the account during the year. Such computations may be made on the basis of the actual dollars received (as a numerator) divided by the amount of money and investments in the account, as averaged from three dates of the fiscal year – the preceding June 30, December 31, and the concluding June 30 – (as a denominator). The approximate yields on the various accounts for fiscal 1977 were:

<u>ACCOUNT</u>	<u>YIELD</u>
The Invested Treasurer's Cash Fund (all in short-term money market securities)	6.06%
The Permanent School Fund (after an allowance for a transfer to principal to compensate for losses due to securities sales over a period of years)	5.63%
The Highway Funds:	
Trunk Highway Fund	5.55%
County State Aid Highway Fund	5.74%
Municipal State Aid Street Fund	5.89%
The Minnesota Adjustable Fixed Benefit Fund	6.00%
The "Basic" Retirement Funds:	
Highway Patrolmen's Retirement Fund	6.26%
Judges Retirement Fund	8.23%
State Employees Retirement Fund	5.86%
Public Employees Retirement Fund (includes Public Employees Police and Fire Fund)	6.14%
Teacher's Retirement Fund	6.02%
The Supplemental Retirement Fund:	
Fixed Return Account	8.29%
Growth Share Account	3.13%
Income Share Account	6.78%
The Minnesota Variable Annuity Fund	4.78%
(Because of valuations over a two-year period, this account showed a gain of 15.9463% for fiscal 1977, which became a "Rate of Return" for participants.)	

The 6.00% yield to the Adjustable Fixed Benefit Fund may be misleading in that pensions are based on a two-year moving average of "total return" (as to stock prices), often supplemented by legislative directives to increase pensions further. Pre-1973 retirees now receive pension benefits approximately 40-45% higher than originally authorized. Of this, 30% was mandated by legislation, including the use of "reserves" during the early 1970's, a portion of which was previously earned through the operation of the Fund, but remained as an integral portion of the account. The balance was due to the performance of the fund above the 5% actuarially-assumed rate.

Chart III illustrates, on a historical basis, the rate of return for the three largest retirement funds.

CHART III

STATE OF MINNESOTA
STATE BOARD OF INVESTMENT

RATE OF RETURN ON AVERAGE AMOUNT INVESTED DURING FISCAL
PERIODS IN THE THREE LARGEST RETIREMENT FUNDS

The net income to the trust and retirement funds, in total and as a percentage of the amount invested, was higher than during any previous year. It must be emphasized that these yields are based on actual income and do not include theoretical gains or losses determined by market valuations of securities. Bonds currently offer the highest yields to the investor, approximately 8%, while the common stock portfolio yields only 4%; nevertheless, the stocks show a profit above cost despite recent market declines and a Dow Jones Industrial Average of 847.11 on September 30, 1977. The State's bond holdings still show a slight book loss due to purchases, in previous years, of bonds yielding 4% to 7%. The average of the 8% return received on bonds and the 4% on common stocks approximates the 6% earned on the funds listed. It is evident that a higher current yield could be received from a greater participation in fixed income securities, but any potential gain through dividend increases and higher equity prices would thereby be diminished. Dividend increases declared by corporate managements on common stocks during calendar 1977, through October 7, 1977, when this report was being written, had already totaled \$4,683,845.00 on the shares presently owned by the State accounts. This continuing increase of dividend income, compared with decreases in net yields to bondholders due to "calls" and refunding at lower interest rates, provides the major reason for equity investments.

ACTIVITIES OF THE ADVISORY COUNCIL AND THE BOARD DURING FISCAL 1977

At meetings of both the Investment Advisory Council and the State Board of Investment, "quality" was emphasized on all investment purchases. Some common stock sales were made when the Dow Jones Industrial Average was in the high 900's and over 1000. Cash flow into the retirement accounts totaled \$296,926,129.00. Of this amount, \$192,736,582.00 was placed in equity securities, the remaining amount was invested in governmental and corporate bonds. During the year, the Government National Mortgage Association mortgage-backed securities were more attractive from a yield standpoint than corporate debt obligations. Therefore, these securities were purchased in quantity as investments for the Permanent School Fund and various retirement accounts. The Board increased its investment activity as to securities in the "current" funds — represented by tax receipts, the highway funds, and various other accounts. Purchases and sales of U.S. Treasury obligations and short-term corporate notes amounted to \$10.72 billion during the fiscal year.

INVESTMENT BOARD POLICIES

The Investment Board took two major actions to emphasize its social, ethical, and governmental responsibilities during this past year. To minimize the possibility of governmental officials attempting to use private business associations as a means of selling securities to the State or in other ways acting in their self interest, the Board unanimously passed the following resolution on November 20, 1976:

"The Executive Secretary requests that purchases and sales of securities not be made through firms which authorize one or more brokers or other sales representatives — who are also holders of public office or officials in a position to influence legislation — to deal either with the accounts handled by the State Board of Investment or with other public funds in the State of Minnesota. The purpose of this policy is to avoid any possible conflict of interest between the Board and any person in an administrative or legislative position within state or local government who may profit through the placement of securities business by various public funds.

"This policy statement is not meant to include general, overall "year-end" bonuses or other payments made to the entire staff of a securities firm on the basis of total commissions received from all customers."

A copy of the resolution was sent to each investment dealer in Minnesota with whom the Investment Board conducts transactions. Each replied, signifying notice of the Board's position.

It is hoped that this resolution will eliminate the possibility of favoritism by any of the State's retirement accounts, including those managed by the State Board of Investment, through the placement of securities orders with officials in a position to influence legislation or administration.

After several years of discussion regarding the voting of proxies, the Board decided to cast its votes (which had been withheld since a corporate controversy in 1972) for or against management in accordance with a definite resolution regarding policy. The statement unanimously passed by the Board on March 25, 1977, is as follows:

RESOLUTION

STATEMENT OF GENERAL POLICY GUIDANCE REGARDING THE VOTING OF PROXIES BY THE STATE BOARD OF INVESTMENT

WHEREAS, the Investment Board recognizes that when performing their duty of investing the trust funds (pension and other funds) for which they are custodian, their primary responsibility is the prudent and responsible investment of the assets of the funds for the economic benefit of the beneficiaries of the funds; and

WHEREAS, it has become increasingly apparent that the standards of prudence and responsibility should be considered in light of this additional criterion; the social and environmental policies of the corporation in which the State owns or contemplates owning investment; and

WHEREAS, the investing in an enterprise which is flagrantly violating the law or stubbornly ignoring public policy constitutes implicit endorsement of those policies, and the Investment Board is of the opinion that government cannot in good faith support such activity without abrogating its duties to the citizens; and

WHEREAS, it is the Investment Board's Opinion that corporations which do not take the welfare of society and its members into consideration, jeopardize their own financial stability, and in today's world risk depreciation of their investment value,

NOW, THEREFORE, BE IT RESOLVED that the following guideline be adopted: The Investment Board shall not knowingly invest or maintain holdings in those corporations which are in flagrant violation of the law or in stubborn disregard of the social welfare of society, or do not recognize environmental responsibilities in their corporate actions, and are not taking reasonable steps to overcome the situation; and

BE IT FURTHER RESOLVED that the following measures be instituted in the matter:

- A. Policy Regarding Contemplated Investments: The Investment Board will not knowingly invest the trust funds or any other funds of the State in those corporations which are found in violation of the guidelines set forth above.
- B. Policy After Investment: In the case that a corporation in which the State owns securities is found to violate the guidelines above, all or some of the following actions will be taken:
 1. The Investment Board will discuss the problem with a representative of the corporation in question for the purpose of:
 - a. expressing the view that, as a shareholder, the State of Minnesota is opposed to such policies.
 - b. being informed as to the progress underway in ameliorating the problem.

2. If voting stock in such corporation is held by trust funds administered by the Investment Board, it may be voted in a manner calculated to ameliorate the existing problem.
 - a. While it is recognized that it is the Investment Board's responsibility to vote all stocks, the Investment Board may solicit recommendations from a sub-committee of the Board concerning the manner of voting stock of a corporation in violation of the guidelines set forth above.
 - b. When deemed necessary to protect the State's interest in the fund and in grave cases, the Investment Board may, upon recommendation of said sub-committee, institute procedures for a shareholder's proposal for the purpose of committing the corporation toward correcting the policy in question.
3. In the instance that no recourse mentioned above is available and/or it is shown that the corporation is not taking steps reasonably calculated to ameliorate the problem in question within a reasonable period of time, the Investment Board may sell the State's investment in the corporation, if sale is consistent with sound investment policy for the affected funds.

Much of this statement is based on similar action by the State of Connecticut. The final sentence was added so as to minimize the possibility of action detrimental to investment portfolios through any possible "forced sales".

Governor Rudy Perpich has presided at all Board meetings since Governor Wendell R. Anderson resigned in December, 1976. The meetings have included a comprehensive review of State policies and securities transactions. The valuable advice from the Investment Advisory Council has been presented at Board meetings through the transaction listings and policy resumes by the Executive Secretary. A complete review of investment procedures follows.

* * * * *

The Advisory Council was formed in 1961, at the time the statutes first authorized equity investments in Minnesota's retirement funds. Most of the members originally appointed still serve on the Council. Their investment expertise, based on their responsibilities and work as leaders of Minnesota's investment community, is enhanced by this long period of service and their knowledge of retirement legislation and investment problems during the past 16 years. It is to be noted that, despite the unquestioned expertise of these members, their service is offered without compensation. Every member of this Council is, or has been, a portfolio manager or research director of a major Minnesota institution.

The accounts supervised by the State Board of Investment are divided into several groups, each governed by individual statutes and managed under different policies. The fund groupings, together with their approximate book valuations as of June 30, 1977, are as follows:

Invested Treasurer's Cash Fund, \$534.4 million. This fund includes tax receipts. Since 1969, prime quality corporate notes have been eligible for use in this account, in addition to U.S. Treasury and agency obligations maturing within three years.

Highway Funds, \$241.8 million. These accounts include U.S. Treasury obligations, debt instruments issued by U.S. Government agencies and short-term corporate notes due within 270 days of the time of purchase. The monies are used for the building and maintenance of highways, roads and streets throughout the state.

Miscellaneous Welfare, Departmental and Temporary Funds, \$186.9 million. These funds are invested according to the terms of particular statutes or applicable policies, primarily in U.S. Treasury securities. The major portion of these accounts consists of proceeds from bond sales; the monies will be used within a comparatively short period of time for state building needs. Also included are endowment funds and trust accounts held for various institutions. During the past three fiscal years, these funds have been increased through the investment of proceeds from securities issued by the Minnesota Housing Finance Agency. This investment total varies according to the needs of the agency in providing housing assistance to Minnesota residents.

Minnesota Adjustable Fixed Benefit Fund, \$757.6 million. This account, administered by the State Board of Investment, may include a maximum of 50% in stocks with the remainder in fixed-income securities. Retirement benefits are paid to all retired employees from the principal and earnings of this fund. A two-year average "total return" from this fund, in excess of the 5% actuarial assumption, has been used to augment pension benefits. Earnings and market appreciation during the early 1970's resulted in an increase in the pensions paid by the various participating retirement funds from 2% to 4% at the beginning of the 1972 calendar year; increases of 4½% to 5½% were paid at the beginning of the 1973 calendar year. The Legislature provided for an additional 25% increase which was paid in two installments — in July, 1973, and January, 1974. This adjustment was made at the time the statutes applicable to the retirement systems of Minnesota were modified to provide benefits based on salaries paid during the "five-high years" of employment. Because of this complete statutory revision, the reserves accumulated during the early 1970's were used to provide very substantial increases for those previously retired. Despite the lower stock and bond markets experienced in 1973-1975, recent portfolio results indicate additional pension increases in the near future. A one-time \$250 additional pension amount has been provided for the pre-1973 retirees and a general pension increase of up to 4% is possible for 1978.

Basic Retirement Funds, \$1,195.4 million. Six State-managed retirement funds, invested separately for employee groups, include U.S. Treasury, municipal and other governmental securities, U.S. Government-guaranteed obligations, corporate bonds, short-term corporate notes, and common stocks.

Supplemental Retirement Fund, \$79.5 million. This fund was established in 1967 for employees of the State College Board and State Junior College Board. The fund consists of three accounts, one of which may be invested up to 100% in equities, emphasizing potential growth with the accompanying market risks. The second includes long-term bonds and stocks oriented toward current income. The third — the Fixed Return Account — was initiated on July 1, 1974, and includes only bond investments; it provides an interest yield over a period of time commensurate with the average life and call protection inherent in the bonds purchased. Legislatures since 1969 have made one or more of these accounts available for use by police and fire fighter relief associations throughout the state, various county employees, those members of the State service who are "unclassified" and do not have the benefits of tenure, and State employees who wish to participate in a deferred income plan through which a portion of their salaries may be taxed at the rates in effect at the time of their retirement.

Minnesota Variable Annuity Fund, \$43.7 million. This fund was established by the 1969 Legislature and was made effective in early summer, 1970. The account now includes a diversified list of common stocks, some fixed-income instruments, and reserves of short-term securities. The participants are teachers who chose this type of program, which provides retirement benefits based on long-term investment performance. Because of the many advantages inherent in the new "five-high year" plan, the Variable Annuity may not now be opted by new teachers but is still available to present members of the State's educational system.

Trust Funds, \$269.0 million. The Permanent School Fund, invested for the benefit of the school children of Minnesota, includes U.S. Treasury securities and Government-guaranteed obligations, corporate bonds of long and short maturities, and common stocks. The Internal Improvement Land Fund includes only U.S. Treasury obligations.

Because of the differing investment policies applicable to these funds, a short review of the history and needs of the various accounts is provided along with a listing of securities.

INVESTED TREASURER'S CASH FUND

During late summer, 1974, it was evident that tax receipts were somewhat higher than the amounts necessary for immediate State expenditures. This "surplus" was invested in U.S. Treasury, government agency, and high quality corporate securities during late 1974 and early 1975, resulting in substantial investment income for fiscal 1975 and 1976. As this "surplus" was identified in late 1974, securities in an amount exceeding \$100 million were extended in maturity from a few days to a range from nine months to three years. Investments at fiscal year-end 1975 totaled \$607.8 million and declined to \$580.9 million on June 30, 1976. By June 30, 1977, the fund further declined to \$534.4 million; nevertheless, a substantial surplus was still evident in the Invested Treasurer's Cash Fund. Earnings of the State's "current" accounts have shown a wide variance due to differences in both the amount invested and in short-term interest rates. During recent years, such earnings have varied from \$4.2 million in fiscal 1972 to a high of \$37.5 million in fiscal 1975. Earnings declined to \$35.0 million for fiscal 1976 and \$24.8 million for fiscal 1977. The declines were due both to somewhat lesser fund totals throughout the year and lower short-term interest rates.

Although it is very difficult to estimate average yields in this account because of variances in the amount invested, yields earned by this fund approximated 8.68% in fiscal 1975, 6.83% in fiscal 1976, and 6.06% in fiscal 1977.

Under the terms of 1973 legislation, the investment department buys and sells according to oral certification of cash available by the staff of the State Treasurer and the Department of Finance. In recent years, there has been an increase in the use of repurchase agreements and of short-term instruments so that funds may earn money over the shortest of periods — sometimes one day or over a week-end. Statutes require that securities in the Invested Treasurer's Cash account extend no longer than three years in maturity.

THE HIGHWAY FUNDS

The funds held for street, road and highway uses in Minnesota may be invested in bonds eligible for purchase by the Permanent School Fund and commercial paper used in the retirement accounts. At present, these funds own short-term U.S. Treasury and agency securities, repurchase agreements backed by U.S. Treasury or agency obligations, short-term corporate notes and securities guaranteed by the U.S. Government through the Government National Mortgage Association. The Commissioner of Transportation certifies the amounts not needed in the immediate future; these sums are invested in maturities approximating the expected disbursement schedule of the Transportation Department. The program includes considerable reinvestment and adjustment of maturity schedules because of the time necessary for planning, purchase of right-of-way and construction of highways. The amount of highway funds invested fluctuates throughout each fiscal year. They varied from a low of \$134.0 million in fiscal 1975 to a high of \$208.5 million in fiscal 1974 and from \$183.5 million to \$241.8 million during fiscal 1977.

The earnings from these accounts increased from \$1.7 million in fiscal 1959 to \$13.8 million in fiscal 1974. Earnings declined to \$12.5 million in fiscal 1975, and \$11.0 million in fiscal 1976. They totaled \$12.1 million in fiscal 1977.

The income earned from these highway fund investments benefits the counties and municipalities in Minnesota directly through the County State Aid Highway Fund and the Municipal State Aid Street Fund. Earnings from the Trunk Highway Fund are used for the overall state highway program.

STATE COLLEGES, WELFARE AND DEPARTMENT OF CORRECTIONS

The State Board of Investment is responsible for the investment of individual and pooled endowment accounts applicable to scholarships and the support of state institutions, certain funds designated for welfare purposes, and patient and inmate accounts in both welfare and correctional institutions. Pur-

chases are limited to U.S. Treasury obligations, except in instances where individual gifts or bequests provide for the use of other investments.

* * * * *

Schedule I reviews the short-term corporate notes and the U.S. Government and agency obligations held by the Invested Treasurer's Cash Fund, the highway funds, and the miscellaneous departmental funds on June 30, 1977. As has been indicated in previous paragraphs, the investment department has substantially increased its activity in the use of these short-term debt obligations. In order to maximize yields and, thereby, increase the income to the accounts. The money market securities division of the investment department supervised short-term securities totaling over \$965 million on June 30, 1977. In addition to those listed on Schedule I, there were substantial short-term investments held by the retirement funds and the Permanent School Fund.

THE MINNESOTA ADJUSTABLE FIXED BENEFIT FUND

The Minnesota Adjustable Fixed Benefit Fund includes the assets representing the reserves from which pensions are paid to individuals who have retired; these recipients are members of various public funds including the six basic retirement funds managed by the State Board of Investment and the fund administered by the Municipal Employees Retirement Board of Minneapolis. There has been a substantial revision in this portfolio during the past five years because of the many different holdings transferred into the account during the 1969-70 fiscal year. Although substantial reserves were accumulated to make possible the continuation of a high level of pensions during years of stock price downturn, these reserves were distributed to retirees during 1974 to compensate partially for the higher pensions now being paid under the "five-high year" plan. Because the 1973 and 1974 downturn in the stock market coincided with a higher rate of inflation, there is some impetus to use the increased yield generated through the price appreciation of both bonds and stocks to provide a basis for adjusting pensions as a compensation for inflationary pressures. In this way, the employer group — the State, municipality, county or school board — would face the risks of long term market fluctuations, whereas the individual would receive benefits more dependent upon actual changes in the cost of living. Concern has been expressed, however, that this account would lose its "complete funding" and become less sound from an actuarial standpoint if long-term benefit improvements were based on the cost of living rather than on actual investment performance. Favorable income gains were apparent during the past two years. It is probable that these increases will justify further benefit improvements in early 1978.

Under the provisions of 1971 legislation, the net return to the Minnesota Adjustable Fixed Benefit Fund was determined on the basis of income and an average of the cost-to-market relationships of stocks taken bi-monthly over a two-year period. This interpretation of investment results meant that a substantial contribution toward the cost of the increased pensions in the State-managed funds was met from this "total return" during the period through 1973; the portion attributable to the Municipal Employees Retirement Board of Minneapolis was used toward higher pensions and increased reserves. In recent years, whenever an increase was granted, the Legislature established a "new base" below which pensions may not decline.

Common stocks may comprise up to 50% of this portfolio, with convertible debentures limited to an additional 10%. On June 30, 1977, the percentage committed to common stock investments, on a net original cost basis, was 47.27% of the portfolio. This fund increased in value by \$94.6 million during the fiscal year.

THE BASIC RETIREMENT FUNDS

The State Investment Board manages six accumulation retirement accounts which include both employer and employee contributions during the employee's working period; at the time of retirement, the assets are transferred to the Adjustable Fixed Benefit Fund. Common stocks may total 50% of these accumulation accounts. At the time of this writing, equities comprise approximately 49% of each fund on

a net original cost basis, with the remainder invested in fixed-income securities of the U.S. Government, its agencies, Canadian governmental units, and corporations.

The 1969 Legislature made it possible for each fund to include a small portion of unrealized market gains in the income portion of the account through a procedure which applies after the market valuations of equities exceed the original cost by 15% for six consecutive two-month periods — or one year. At such a time, an amount equal to 3% of the cost of the equities could be added to the retirement fund for actuarial and accounting purposes. The first such increase occurred on October 31, 1972; this was followed by a second increase on December 31, 1972. Because of the probability that such market increases would not continue, it was decided that each of these increases would be added to the income accounts in three equal installments during three successive fiscal years. The first increase applied during fiscal 1972, 1973 and 1974, while the second increase was applicable in fiscal 1973, 1974 and 1975.

The 1973 Legislature modified the law to provide for such an increase or decrease whenever the market valuation of equities varied from the revised cost figure by 10% for six consecutive two-month periods. The market downturn during 1973 and 1974 resulted in the first 3% downward revision on February 28, 1975. A second decrease applied to several of the retirement funds on April 30, 1975. Because the 1973 statute authorized the computation of such yield declines over a five-year period, it is anticipated that the net effect of such calculations will be minimal when computing fund yield performance on a long-term basis.

By early calendar 1975, because of rising stock prices, it was evident that there would be no further downward adjustment in the statutory valuation of equities for an extended period. Schedule III indicates the net yield accruing to the three largest basic retirement funds during the period 1957 through 1977. During these 21 years, the yield has increased from less than 3% to approximately 6%. Footnotes 14 and 15, following Schedule III, explain the effect of the statute relating equity valuations to the stock market.

Schedule IV lists the securities held in the largest basic retirement funds on June 30, 1977. Because of the identical purpose for which these accounts are established, it has been investment department policy to use the same securities in each account, whenever funds have been available. Differing flows of new money, however, have resulted in varying cost and a somewhat different overall composition of these three accounts.

The Public Employees Police & Fire Fund was established during the early 1960's in order to provide an investment vehicle for the smaller police and fire fighter organizations throughout the state as well as for larger organizations which chose to participate in this retirement plan. Schedule V includes the fixed-income securities in this account on June 30, 1977, and Schedule VII lists the equity portfolio. This account showed a sizable increase in value — from \$57.5 million to \$66.6 million — during the past fiscal year.

The Highway Patrolmen's Retirement Fund resulted from the merger in 1969 of the State Police Officers' Retirement Association and the Highway Patrolmen's Retirement Association. Because the two previous accounts were quite small and had limited and unpredictable flows of new money, the new merged account appears to be more manageable; this has benefited both groups. Schedule VI includes the fixed-income securities in this account on June 30, 1977, and Schedule VII lists the equity portfolio.

State, municipal and school district bonds comprised over 71.0% of total investments in these retirement funds as recently as the late 1950's; such holdings declined to 0.3% by June 30, 1977. This decline was due to the sale and maturity of bonds, as well as the placement of all new money in other types of securities. Because most of the remaining "municipals" consist of odd lots that carry either no rating or a low rating by the services, it is presumed that a large portion of these bonds must be held to maturity.

The Judges Retirement Fund was established in 1974; no permanent investments were purchased until the 1975 fiscal year. Because of statutory limitations, the percentage of funds invested in equities may be increased by only 5% of total investments each year. During the 1977 fiscal period, the fund was subject to a 15% equity limitation. Schedule VIII lists the investments as of June 30, 1977.

THE MINNESOTA SUPPLEMENTAL RETIREMENT FUND

The three accounts of the Minnesota Supplemental Retirement Fund are invested in accordance with three different philosophies in order to meet the individual needs and desires of the participants. The income share account, limited to 50% in common stock, consists primarily of high quality corporate bonds and emphasizes comparatively higher yielding equities of well-known companies. The growth share account, on the other hand, may participate in the equity market up to 100% of total assets and includes stocks of companies offering a low current yield and representing firms which may have significant long-term potential from the standpoint of earnings growth. These stocks tend to fluctuate in price to a far greater extent than those in the income share account. The fixed return account, invested entirely in bonds, is not subject to market fluctuations. The amounts contributed each year into this account, however, will earn varying interest rates depending upon the existing yield structure.

The growth share and income share accounts were established on a unit basis on October 1, 1967, with each unit worth \$10.00 on that date; due to a two-for-one split on June 30, 1973, the current units had a net worth of \$5.00 on inception date. A summary of the market valuations experienced by the two accounts since the beginning of the program in 1967 is as follows (as adjusted for the two-for-one split):

	Income Share Account		Growth Share Account	
	High	Low	High	Low
Oct. '67 — Dec. '68	\$5.52 (Nov. '68)	\$4.98 (Oct. '67)	\$5.44 (Nov. '68)	\$4.52 (Feb. '68)
1969	5.40 (Jan.)	4.99 (Dec.)	5.32 (Oct.)	4.71 (July)
1970	5.69 (Dec.)	4.81 (Jan.)	4.94 (Feb.)	3.73 (June)
1971	6.30 (Dec.)	5.86 (Jan.)	6.21 (Dec.)	5.09 (Jan.)
1972	7.11 (Dec.)	6.36 (Jan.)	7.92 (Dec.)	6.47 (Jan.)
1973	7.15 (Sept.)	6.69 (Nov.)	7.53 (Jan.)	5.29 (Dec.)
1974	6.80 (Feb.)	5.31 (Sept.)	5.35 (Jan.)	3.21 (Sept.)
1975	7.12 (Dec.)	6.26 (Jan.)	5.17 (June)	3.95 (Jan.)
1976	8.84 (Dec.)	7.58 (Jan.)	5.72 (Dec.)	5.28 (May)
Jan. — June '77	8.84 (June)	8.51 (Mar.)	5.36 (June)	5.07 (May)

Schedule IX lists the assets in the income share account on June 30, 1977. Both equity and bond valuations have declined since calendar year-end 1976. Nevertheless, the stocks in the income share account have held their value particularly well due to the market's new emphasis on "yield securities". The comparative "safety" of this portfolio, due to the type of stock used and the diversification between fixed-income and equity securities, has resulted in its use by most retirement organizations eligible to participate in the Supplemental Retirement Fund. It is anticipated that the results, over a period of years, will never be spectacular, but will tend to be satisfactory from the standpoints of safety, yield and long-term growth.

Schedule X consists of a listing of the securities in the growth share account on June 30, 1977. Under the terms of the Prospectus for the growth share account, it is a policy of the department to maintain a steady investment in stocks of companies which evidence growth potential. It has also been an established policy to avoid extreme "buy" or "sell" programs which could result in a high cash position for a brief period of time. Such a program can be disastrous if the market makes unanticipated moves. This means that the account is in a reasonably fully-invested position at all times and will continue to be subject to significant changes in market values, particularly during periods of stock market increases, as in 1972, and during times of market uncertainty and decline, such as during 1973 and 1974. Although the securities in this account have shown market gains during the recovery that began in 1975, these stocks have not experienced the acceptance evidenced by the higher-yielding shares in the income share account.

The assets in the fixed return account, established on July 1, 1974, are listed in Schedule XI. Unit valuations do not change; they are arbitrarily set at \$5.00 per unit. The return from this fund is based entirely upon the rate of interest received from the bonds purchased in the account.

Under the provisions of the applicable statutes, the Investment Board establishes an "indicated rate" of return for the coming fiscal year on July 1. On July 1, 1974, this rate was set at 8.50%. The bonds purchased during the fiscal period provided a yield somewhat higher than that anticipated. The participants — then consisting only of individual retirement funds — received 9.10% on all contributions made during the 1975 fiscal year. During fiscal 1976, the plan was broadened in scope to include individuals who wish to participate in a fixed-return investment under various retirement or deferred income plans. The return to individual participants was set at 8.9% for those contributions received during the 1976 fiscal year; in July, 1977, the return for individuals was established at 8.3% for 1977 fiscal contributions.

The amounts received from the various retirement organizations were invested at a rate which may, presumably, be applicable for the year of contribution plus an additional nine years. This extended period of "guaranteed" income is due primarily to the "call" and "refund" protection received on the bonds purchased. The participating retirement organizations received 8.8% for a ten-year period on those contributions received during fiscal 1976 and 8.1% for those received in fiscal 1977. The slightly lower rate attributed to the institutional participants is due to the fact that a portion of the income will be set aside in the form of reserves to provide for any possible future diminution of income. Because of the uncertainties in the economy, an assumed rate for the 1978 fiscal year has been established at 7.0%. Participants will be paid a higher rate of return if the securities purchased during the coming year warrant such payments.

There is a substantial amount of interest in the fixed-return account because of the investment uncertainties made evident by the 1973-74 decline in both the stock and bond markets. The idea of a definite interest earnings — with no dependence upon stock or bond market fluctuations — apparently has great appeal to many fund participants. Because of the response to this new account, the assets increased from \$4.2 million to \$8.6 million during the 1977 fiscal year. The significant influx of contributions to this account has resulted in considerable reserves being held in short-term investments. These monies will be placed in securities of longer maturity for which commitments are being made. It is the intent of the investment department that over 40 issues of fixed-income securities comprise the account, so that the fund may be assured of adequate industry diversification. It is emphasized that the bonds purchased are concentrated in the AAA and AA quality levels. This will add to the safety applicable to the fund contributions and should minimize the chance of losses.

MINNESOTA VARIABLE ANNUITY FUND

The Minnesota Variable Annuity Fund was advocated prior to the adoption of the "five-high year" plan by the Teachers Retirement Association. The participants received a net return of 5.4500% in fiscal 1971, 9.1670% for fiscal 1972, and 6.2393% for fiscal 1973. During fiscal 1974, the participants suffered a decline of 4.1478%, followed by another decrease of 17.9638% during fiscal 1975, and a decline of 0.0101% for the fiscal year ended June 30, 1976. The laws applicable to valuations and computation of net return dictate that a two-year period be used in calculating increases or decreases to the fund. As has previously been indicated in this report, the stock and bond market "lows" of 1974 were used in these calculations through fiscal 1976. Because the two most recent fiscal years have evidenced higher stock prices, the 1977 fiscal results showed an increase of 15.946%. Cost-to-market ratios already applicable to the June, 1978, computations indicate a probable minor positive net return for the next fiscal year.

Although most variable plans are based entirely on participation in equity investments, the widespread use of this fund and the fluctuations in the stock market since the account's inception have caused the investment department to adopt a policy which includes approximately 25% to 35% in fixed-income investments.

The option for the Variable Annuity was terminated during fiscal 1974. Therefore, the fund will continue only as an investment medium for those teachers who have already chosen to have a portion of their retirement monies invested in accordance with the Variable Annuity concept. The securities in this fund on June 30, 1977, are listed on Schedule XII.

THE PERMANENT TRUST FUNDS

The State's permanent trust funds showed their greatest rate of growth during the 1940's and 1950's. Until a constitutional amendment was passed in 1956, half of the receipts from the iron ore occupation tax accrued to the principal of the permanent trust funds, which were invested for the benefit of the schools, the University of Minnesota and other state institutions. In recent years, the entire receipts from this tax have been applied directly toward meeting the State's current educational needs.

During the years immediately following the adoption of the constitutional amendment, long-term low-coupon U.S. Treasury bonds were sold from the Permanent School Fund, with the proceeds being invested in higher-yielding corporate securities. In accordance with this amendment, corporate bonds were purchased to the approximate maximum of 40% of the fund. During the past several years, however, mortgage-backed securities guaranteed by the U.S. Government and issued through private organizations in cooperation with the Government National Mortgage Association have offered a yield comparable to, or greater than, that received from corporate bonds of similar quality. These mortgage-backed securities were purchased during the summer months of 1974 at yields as high as 10.14%. Because of the lack of inflow of new cash into this fund, the gradual return of principal offered by this type of investment has been very attractive; we have thus been able to maintain a cash flow for current investment needs.

Arrangements between the State Board of Investment and the Minnesota Banker's Association have resulted in a program through which the Permanent School Fund has purchased those portions of Small Business Administration loans which are guaranteed by the United States Government. These loans are arranged through various banks in Minnesota and are "pooled" through the facilities of the Summit State Bank of Richfield. This program, initiated through the cooperation of the Governor, the State Treasurer and the Minnesota Banker's Association, appears to offer a unique opportunity to achieve a satisfactory yield and an adequate cash flow to this permanent trust fund. It also marks a unique opportunity for following prudent investment principles in achieving an appropriate yield, while aiding the development of businesses in Minnesota.

Because of the comparative attractiveness of United States Government-backed securities, the corporate bond portfolio has been reduced to 28.9% of the book value of the Permanent School Fund; it is anticipated that the holdings of high-quality debt securities will be increased as more appropriate yield spreads become prevalent. United States Government and Government-guaranteed obligations constitute 47.3% of the book value of this account; common stock investments are maintained near the 20% limit.

Schedule XIII indicates that the investment changes have resulted in an increase in net yield from 2.68% during the late 1950's to 5.63% during the 1977 fiscal year. A marked increase in return during the past six years was possible because of the use of United States Government-guaranteed obligations. A portion of the income will be transferred on an annual basis to the principal of the account to replenish the book losses taken through the sale of long-term United States Treasury and corporate fixed-income obligations during the past 16 years.

Schedule XIV lists the securities in the Permanent School Fund on June 30, 1977.

* * * * *

A review of policies concerning the placement of business, together with a summary of transactions completed during the fiscal year from July 1, 1976, through June 30, 1977, follows the schedules described above.

* * * * *

The investment results achieved in fiscal 1976 and 1977 have been satisfactory. The cooperation and advice received from the members of the State Board of Investment and the Advisory Council on State Trust Funds played a most important part in achieving these results. It is now evident that the funds benefited considerably through the significant purchase program completed during late 1974 and 1975. Considering the size of the fund and varying interest rates, earnings of the Invested Treasurer's Cash Fund have been increased due to the attention given to current bank balances by the Treasurer's and Finance offices.

The many Minnesota investment accounts must be managed under widely different investment policies and procedures. The Advisory Council has been of great help in determining the objectives for the various funds. It is hoped that each of these investment accounts may be managed for the lasting benefit to all of Minnesota — both the retirement beneficiaries and the State's citizens.

Respectfully submitted,

Robert E. Blixt, C.F.A.
Executive Secretary

- (1) Book value figures based on those shown on Treasurer's General Report on State Finances on date listed, with adjustments for calls, maturities and investments committed for but not yet received.
- (2) Computed by averaging book value of fund on last three report dates, ending with the date listed.
- (3) Income figures obtained from the secretaries or directors of the respective retirement funds.
- (4) Computed by dividing income of fund for fiscal period by average book value of fund during period.
- (5) Includes the Public Employees Police & Fire Fund for periods after July 1, 1960, when it was established.
- (6) In 1970, State Employees Retirement Fund changed from calendar-year to a fiscal-year basis.
- (7) Book value figures for June 30, 1969, are listed before the transfer of bonds on that date from these basic retirement accounts to the Minnesota Adjustable Fixed Benefit Fund. The decline in book value figures during subsequent months indicates this transfer of bonds and the transfers of stocks during the next fiscal year. These basic retirement accounts own assets representing the major portion of the Minnesota Adjustable Fixed Benefit Fund; the extent of this ownership is not calculated for purposes of this table because of the varying participations by the funds.
- (8) Book value figure is adjusted for the July 1, 1969, transfer of bonds, stocks and cash to the Minnesota Adjustable Fixed Benefit Fund.
- (9) This figure was computed by using the July 1, 1969, book value.
- (10) Actual six months receipts annualized.
- (11) Computation of income for fiscal 1972 differed from that described in footnote (4) in two respects: first, the average book value for the year was increased by the amount of the deferred yield adjustment account, established by the 1971 Legislature (Minnesota Statutes 1971, Section 356.20, Subdivision 5), and secondly, an increase in equity portfolio valuation under the provisions of Minnesota Statutes 1971, Section 11.16, Subdivision 13, resulted in a 3% increase in the value of the equity portion as of October 31, 1972. One-third of the amount of this increase was applied to the income for each of the fiscal years 1972, 1973, and 1974.
- (12) Computation of income for fiscal 1973 and 1974 includes allowance for the two factors mentioned in footnote (11) plus an additional one-third of the 3% increase in the value of the equity portfolios as of December 31, 1972. This second increase

- will also be applied to the income for fiscal 1975. Therefore, income for fiscal 1973 and 1974 includes two such amounts, each representing one-third of 3% increases applied to the equity portfolios under the provisions of Minnesota Statutes 1971, Section 11.16, Subdivision 13.
- (13) Computation of income for fiscal 1974 includes allowance for the factors mentioned in footnotes (11) and (12).
- (14) Computation of income for fiscal 1975 includes one-third of the 3% increase as of December 31, 1972, as mentioned in (12). Under the provisions of a 1973 amendment to Subdivision 13, as of February 28, 1975, a 3% decrease in the value of the equity portfolio of each fund was indicated because of lower stock prices during the previous year. On April 30, 1975, another 3% decrease in the value of the equity portfolios of the Teachers' Retirement Fund, the State Employees Retirement Fund and the Police and Fire portion of the Public Employees Retirement Fund resulted from the application of the indicated statutory provision. One-fifth of each of these valuation adjustments was deducted from the income of the appropriate funds and is, therefore, reflected in the yield computations for 1975.
- (15) Computation of income for fiscal 1976 and 1977 includes the February 28, 1975 3% decrease in value of the equity portfolios of each fund and the April 30, 1975, 3% decrease in value of the equity portfolios of the Teachers' Retirement Fund, the State Employees Retirement Fund and the Police and Fire portion of the Public Employees Retirement Fund resulting from the provisions of a 1973 amendment to Subdivision 13. One-fifth of each of these valuation adjustments was deducted from the income of the appropriate funds and is, therefore, reflected in the yield computations for 1976 and 1977.

Note: Yields computed as indicated in footnote number (4) for 1972 through 1976, in the manner used in prior years, would be:

	PERF	SERF	TRF
1972	4.82%	4.67%	4.75%
1973	4.95%	4.70%	4.85%
1974	5.43%	5.13%	5.48%

(1) Book value figures based on those shown on Treasurer's General Report on State Finances on date listed, with adjustments for calls, maturities and investments committed for but not yet received. Beginning December 31, 1974, book value was taken from State Board of Investment ledgers.

(2) Computed by averaging book value of fund on last three report dates, ending with date listed.

(3) Income figures obtained from the State Department of Finance. Beginning June 30, 1975, income figures are from State Board of Investment ledgers.

(4) Includes investment income from the Swamp Land Fund which was combined into the Permanent School Fund after passage of a Constitutional Amendment in 1962.

(5) Computed by dividing total investment income of fund for fiscal period by average book value of fund. Yield figures beginning on June 30, 1975, reflect the fact that income was taken from the State Board of Investment ledgers, which are computed on an accrual basis, whereas the figures formally obtained from the State Department of Finance were on a cash basis.

(6) The transfer of a portion of the income to the principal of the account is called for under the Minnesota Constitution, Article VIII, Section 4, as amended in 1962, and implemented by Minnesota Statutes 1974, Section 11.015, Subdivision 7, in order that the difference between the sales price and original cost of securities be returned to the principal of the account. Sales of low coupon U.S. Treasury securities at less than cost resulted in the transfers during recent years.

(7) Computed by dividing net investment income of fund for fiscal period by average book value of fund.

*The income received during fiscal 1962 and 1963 was subjected to accounting adjustments which tended to overstate the 1962 figures, due to the accumulation of discounts on bonds purchased (Minnesota Statutes 1976, Section 11.05, Subdivision 2) and understate the 1963 results, due to the combining of the Swamp Land Fund into the Permanent School Fund during that fiscal year.

GOVERNOR RUDY PERPICH
STATE AUDITOR ROBERT W. MATTSON
STATE TREASURER JIM LORD
SECRETARY OF STATE JOAN ANDERSON GROWE
ATTORNEY GENERAL WARREN SPANNAUS

ROBERT E. BLIXT
EXECUTIVE SECRETARY

**STATE OF MINNESOTA
STATE BOARD OF INVESTMENT**

Room 105, MEA Building
55 Sherburne Avenue
Saint Paul 55155

October 7, 1977

TO: Members of the Minnesota Legislature
Investment Underwriters, Brokers and Dealers

FROM: Robert E. Blixt, C.F.A., Executive Secretary

Since the office of the Executive Secretary of the Minnesota State Board of Investment was established in 1960, it has been the policy of the department to list the recipients of all securities orders and to explain the reasons for the distribution of business. Although this review may be somewhat lengthy and too detailed, we believe it mandatory because of the many considerations which are so obvious in reviewing the business practices of any public fund holding over \$3 billion of securities. Orders are placed for several billion dollars of securities each year. Securities firms and organizations with differing specialties and located throughout the United States and Canada deal with the investment department. As Congress, the Securities and Exchange Commission and governmental groups throughout the nation have become more interested in reviewing the "prudence" demanded in the management of public funds, it has become even more necessary and appropriate that recipients of these orders be mentioned and that explanations be provided to the citizens of Minnesota.

The members of the Advisory Council have been particularly cognizant of avoiding any possible "conflict of interest" as to their business and professional life as related to their advisory capacity with the State Board of Investment. Important considerations include:

1. No appointee has been associated with a brokerage house, "government bond" sales department of a bank, or any other organization which could profit from securities orders by the Investment Board. In those instances in which Minnesota banks have sold U.S. Treasury and agency obligations to the Board, transactions have been handled on a competitive basis and are through departments having no direct association with the bank's trust department or portfolio management division whose members may serve on the Advisory Council.
2. No member of the Advisory Council votes as to the purchase or sale of stock representing a company of which he is an officer or employee.
3. It is presumed that several or all of the Council members may own these stocks in their official capacities, since they represent investment departments of financial institutions. In fact, we prefer owning investments which are also held by major Minnesota institutions so that we know such securities are being followed from a financial and quality standpoint by the staffs of those serving on the Council. In instances pertaining to situations where local institutions own substantial amounts of any one stock, the Council member working for such an institution fully discloses the relationship and does not vote as to "buy", "sell" or "hold" the particular issue.
4. No purchases or sales are made on the basis of a simple majority of the Council members present at any particular meeting. Instead, we ask that the unanimous opinion of those voting be expressed concerning the purchase or sale of a particular security.
5. In recent years, since the investment department has received appropriations with which to maintain analysts and specialists, the specific recommendations to buy and sell have been made by State investment staff members.

Therefore, any possible conflict of interest appears to be minimal or nonexistent in that Council decisions and actions come in the form of leading and directing lines of discussion, comparing economic thoughts, and setting policy as to types of purchases and sales under probable future economic and market conditions.

It should be stressed that the State funds do own common stocks and fixed-income securities of firms whose officers serve or have served on the Advisory Council. These organizations include: The First Bank System (Gaylord W. Glarner, Senior Vice President, First Trust Company, St. Paul, and John M. Harris, Investment Counsel, Northern City National Bank of Duluth), Northwest Bancorporation (James C. Harris, Vice Chairman of the Board of Directors, Northwestern National Bank of Minneapolis; Peter A. Heegaard, C.F.A., Senior Vice President, Trust Investment Department, Northwestern National Bank of Minneapolis, and LeRoy F. Piche, C.F.A., Senior Vice President, Investments, Northwest Bancorporation), The Northwestern National Life Insurance Company (Donald E. Jondahl, Executive Vice President of Finance), The St. Paul Companies, Inc. (Robert S. Davis, C.F.A., Executive Vice President of Finance), and Medtronic, Inc. (Dale R. Olseth, President). Mr. Olseth was formerly President of Tonka Corporation.

The investment department has been informed of only two members of the legislature who work for brokerage houses which deal with the State of Minnesota and therefore may present appearance of a "conflict of interest". In the case of Dain, Kalman & Quail, the State's business is divided between representatives of the former J.M. Dain organization (Paul Stoner of St. Paul) and the previous Kalman group (Stan Aby of Minneapolis). Senator Mel Frederick is employed by the Rochester office of this firm and received no direct commissions from State business. Likewise, some business is placed with the institutional division of Piper, Jaffray & Hopwood in Minneapolis (Dan Lastavich), with a portion of the commissions going toward the Leuthold Service, consisting of statistical information valuable to investors. Again, an account representative, Senator Eugene E. Stokowski, has no direct benefit from the State account. We have been informed of no other Minnesota elected or appointed official who is associated with the brokerage business. There may be some criticism of dealings with Piper and Dain in that the general economic well-being of the firms and possible long-term profit sharing and bonus plans could be affected by the State business. We feel this to be too minimal to be of any significance.

The Advisory Council and the investment staff sincerely believe that there has been no "conflict of interest" in our placement of business among the various securities firms.

The following schedules detail the securities orders placed during the twelve-month period from July 1, 1976, through June 30, 1977. It is to be emphasized that the Executive Secretary of the State Board of Investment takes full responsibility for the methods and procedures used in this allocation of securities business. It is recognized that the commissions on the shares of stock purchased and sold over major exchanges and the profits — as well as losses — from dealings with the investment department in bonds, unlisted stocks and short-term money market instruments, may be very significant. It is certainly a credit to Minnesota's constitutional officers who have served on the State Board of Investment since this program was initiated in 1960 that none have asked that business go to friends or political supporters. Likewise, pressures from other Minnesota citizens and officials have been comparatively minimal. Nevertheless, there may have been evidences of proposed changes in investment organization and policies because of our insistence that politics play no part in the placement of securities business. It is hoped that such pressures, which have been evident during the past two years, may be minimized.

Certain firms both within Minnesota and outside the state have questioned our procedures and have asked whether they are receiving their "fair share". There is no "fair share" for any individual or firm. It would be no more logical to "give business" to every securities firm in Minnesota — or throughout the nation — than to buy groceries to fulfill the needs of the State's institutions and schools from every small grocery store throughout the state. The changes witnessed by the securities industry in recent years — the new degree of competition, the merger and consolidation of many securities firms, the problems of "May Day" 1975 with the accompanying negotiated commission rates, the new questions as to whether securities research should be "unbundled" from the package that once was included in total commission rates — have all affected the ways and methods in which the investment department places securities orders.

Since the department was established, all transactions have been a matter of public record. Each

purchase and sale, along with the indicated commission or probable profit in the case of a net transaction, is reported to the Board members at each meeting. Members of the press may be in attendance and receive lists of this information.

The department has been appreciative of the economic, general business and securities research which has been provided by many firms. It is evident that the State's investment department may have limited use of research oriented primarily toward those individuals or funds which speculate in the market. Moreover, it may be inappropriate for comparatively conservative portfolios such as those represented by public trust and retirement funds to invest in securities of smaller companies. It has usually been found that the quick action necessary to time such purchases and sales is often difficult under State investment procedures. It is recognized that firms handling such equities and fixed-income instruments aid the State's securities industry through the investment banking process. They also provide markets for securities of new businesses. Nevertheless, there appears little relationship between the specialization in these securities and servicing the needs of large institutional accounts.

These considerations, together with the economic pressures suffered by many brokerage organizations during the extreme market fluctuations from 1969 through 1977, have caused the investment department's personnel to review the allocations and methods of handling our transactions so as to achieve the best possible results for the State funds. The accompanying paragraphs point out the extent to which Minnesota's investment department has used "soft dollars" — commissions on securities business transacted over a major exchange — to pay for specific investment services. The introduction of "negotiated rates" by member firms of the stock exchanges, however, may decrease — or perhaps eliminate — the use of such "soft dollars" for these services.

Many individuals familiar with the securities industry believed that the use of "soft dollars" to pay for information and services would be eliminated after "May Day" 1975. Since that date, the State Board of Investment has received these services through "soft dollar" commissions at rates from 25% to 45% less than those previously in effect. Some firms have completed transactions at even far greater discount. Nevertheless, we are somewhat fearful of the quality of the execution to be expected through such transactions and hope to continue the receipt of investment information and research materials. Many types of service are now being purchased through "soft dollar" commissions at these prevailing lower commission rates. The investment department has found that competition is intense.

During the past years, some "soft dollar" commissions were paid to Paine, Webber, Jackson & Curtis, Inc., for work regarding a data processing system which had been first suggested by them. Most of this fee, however, is now covered by legislative appropriations. This service, operated by Gibbons Associates, Inc., provides the State's retirement administrators and financial officials — as well as the investment staff — with information concerning our portfolios and details regarding the securities transactions. The system makes possible some research analysis and a complete portfolio listing.

During fiscal 1976, a "bidding process" was initiated to determine which firms, of known trading capabilities, could participate in "soft dollar" arrangements for a performance measurement contract with Standard Valuations, a subsidiary of LFK, Inc. This procedure has been continued during 1977; the Milwaukee Company now handles the transactions.

Other research services are paid through securities orders placed with investment firms chosen by the research organization. Commission business to Mesirov & Company pays for research service provided by the Harris Bank and Trust Company of Chicago. Compensation for investment advice received from the Bank of New York is handled by business placed through DeHaven Townsend, Crouter & Bodine. Other particular investment information is provided on a commission basis through Jessup & Lamont; Morgan Olmstead, Kennedy & Gardner; Merrill Lynch, Pierce, Fenner & Smith; Shearson Hayden Stone; Smith Barney, Harris Upham; Cowen & Co.; and Wertheim & Co.

During fiscal 1977, the State Board of Investment and the investment staff have shown renewed interest in ideas, opinions, and services which have not been emphasized in the past. For example, each member of the State Board of Investment, as well as the investment office, now receives copies of Investor Responsibility Research Center, Inc., publications which offer complete information concerning the voting of proxies. This service, provided by Investment Information, Inc., on the basis of business placed through Morgan, Olmstead, Kennedy & Gardner, also makes possible participation in symposiums regarding the role of stockholders in corporate decisions. Other programs and conferences have been

sponsored in recent years by: Merrill Lynch, Pierce, Fenner & Smith, Inc.; Smith, Barney, Harris Upham; Sutro & Co.; Jefferies & Co.; and Salomon Brothers. These firms provide "free" tuition or conference fees, if any exist. On the other hand, the department is dependent upon its legislative appropriations for all travel and hotel expenses for these meetings. It is our opinion that pertinent meetings and discussions are having a greater value than the stacks of written materials which previously were regarded as the limits of research.

The accompanying schedules in this report list the number of shares purchased or sold, or the face value in the case of bond transactions. This listing is not necessarily indicative of the commissions involved because of the impossibility of determining the exact profit or loss associated with any transaction handled on a competitive or a net price basis. After a review of departmental operations by a legislative commission, the 1965 Legislature passed a bill, now Minnesota Statutes 1976, Section 11.13, which reads as follows:

"All securities purchased or sold by the State Board of Investment, except stocks listed or traded on a major United States stock exchange, securities bound by underwriting restrictions, or securities classified as private placements and offered only to a limited number of institutional investors, shall be purchased or sold on the basis of competitive offerings or bids received from at least two firms known to specialize in the securities being traded and likely to position these securities in relevant quantities."

Except in the instances mentioned above — where there is a type of specialized service or evidence of proven trading ability — we have allocated securities business on the basis of continuing long-term research. It has been found, even prior to the initiation of negotiated rates, that the distribution of business on a price basis is sometimes very effective. In such instances, dealings are handled by the "third market" firms or over the "Instinet System" through which institutions trade directly with each other. The investment department accepts competitive offerings and bids from dealers who are either prime market makers or are known to position these particular securities in quantities desired for the State funds. During recent years, price has been the dominant factor in transactions involving U.S. Treasury securities, unlisted stocks, corporate bonds purchased after the termination of underwriting syndicates, and a significant percentage of listed stocks. We have found definite disadvantages in the use of open competitive offerings and bids in transactions involving large blocks of stocks. It appears that it is preferable to deal with one lead broker or dealer in these instances; under Minnesota law, however, we must check with other firms to be assured of a satisfactory price.

A number of dealers often provide the same merchandise at identical prices. This applies particularly to corporate bonds still in syndicate and to stocks that are purchased over a major exchange. The State's purchase of bonds at the time of original issuance has declined in recent years. This was partially due to the apparent attractiveness of bonds on the secondary market, particularly when the market was declining so rapidly that underwriters found it almost impossible to establish viable offering prices for new bond issues. During the past four years, there was a continued increase in the use of Government-guaranteed mortgage-backed securities. "Private placements", or fixed-income issues sold to a comparatively small number of customers, were used to a considerable extent until the past fiscal year. We have felt, in recent months, that there is a comparatively small yield differential between that offered by these securities and that which could be obtained through more marketable issues.

The dealers used in completing transactions for the State often change along with investment policies; certain firms specialize in particular stocks or bonds or are more active in the underwriting of certain securities issues. Factors involved in the placement of securities orders when there is no price distinction include the extent of participation by various dealers in the bond syndicates; the value of stock, bond and economic research provided by these firms; and, in the instance of corporate bonds, some preference is given to Minnesota dealers who are members of the bond syndicates and have committed their funds to the underwriting. There has been a tendency during recent years for firms to divide their bond and stock departments into separate organizations with little apparent coordination or relationship as to service. It is, therefore, becoming increasingly difficult to compensate for stock information through bond orders or, likewise, for bond service through stock transactions.

The distribution of public fund business has been somewhat complicated in recent years due to the establishment of institutional departments in many securities firms. The employees and sales representatives working in these departments receive a somewhat lower commission than is usual for brokers. The

obvious reason is that institutional accounts make greater use of the research departments and can place orders in larger volume. Therefore, it is only appropriate that a far greater portion of the commission be used for the securities firm to enhance the quality of the research department. Whenever possible, the Minnesota State Board of Investment has dealt with the "institutional" department or with individuals assigned the institutional accounts. In several instances, securities business for bonds, stocks, U.S. Treasury obligations and commercial paper are all assigned to different specialists or sales departments. Because of the various capabilities of these sales personnel, there are limited instances in which more than one individual handles the State account. We believe it most inappropriate to deal with more than one office of the same securities firm merely to distribute business to additional salesmen.

A listing is available showing the names of individuals handling the account of the Minnesota State Board of Investment by various securities firms as of fiscal year-end 1977. In numerous cases, particularly involving firms underwriting large bond issues, dealings are handled through the "bond department", or "order desk", with no particular individual designation.

We have been most disappointed with a tendency on the part of some larger securities firms to place the Minnesota investment account in the hands of "eager" sales personnel who know nothing about the history or needs of the department, sometimes replacing individuals who have long-term associations with our investment program. The merger of securities firms during the past few years has resulted in significant changes in personnel. In this process, we have sometimes lost the opportunity to deal with experienced investment experts who have proved to be of great assistance over the past years. We are particularly disturbed when one well-informed expert may be replaced by several sales-oriented individuals who wish to ask questions and "push merchandise" being promoted at that particular time. It is our opinion that there is little to gain by the securities industry in fostering such sales practices. Those of us in the Minnesota investment department hope we can continue to deal with "low pressure" organizations which recognize the whole program, not potential opportunities for many individual salesmen.

We have been questioned concerning the possible loss which could result from the bankruptcy of any organization dealing with the State. It is presumed that the accounts would be protected in such an instance because the State pays for the securities only after they are received, in good form, by banks in New York, Chicago, or the Twin Cities, acting for the State of Minnesota.

The following resumes outline the policies of the State in distributing securities business; the listings show the firms with which the State completed specific transactions. It is to be emphasized that this supplement in no way signifies approval, endorsement, or license of such firms by any State agency. The regulation of securities and dealers in Minnesota is handled by the Securities Division of the Department of Commerce. The investment department, on the other hand, concerns itself with completion of securities transactions at the best possible price, consistent with the receipt of necessary research materials and services.

Section 1. U.S. Treasury Securities Transactions

All purchases and sales of U.S. obligations are placed on a competitive basis. In transactions of larger size and longer maturity, in which cases it is possible that Minnesota banks do not position the securities in appropriate quantities, offerings or bids have been sought from two or three Minnesota banks and from various prime market dealers. If a Minnesota bank contacted is able to equal the best price quoted by any other dealer, the purchase or sale is completed through that particular bank. Repurchase agreements are negotiated on a competitive basis through those banks and investment firms which have expressed an interest in providing this type of security. These transactions consist simply of the purchase of U.S. Government or agency securities, with a simultaneous sale of such securities to the same dealer at some later date. In this way, the amount of net income is set at the time of the initial purchase. During fiscal 1974, the volume of purchases and sales nearly doubled; there was an additional increase of 50% in fiscal 1975. During the past two fiscal years, there have been further increases in activity. Renewed attempts have been made to maximize earnings through investing a higher portion of funds available in the State's major pooled account for tax receipts — The Invested Treasurer's Cash Fund. A surplus in tax receipts above earlier expectations was evident in late summer, 1974. Although the legislature has appropriated these funds to be used since that date, balances still exist to a degree somewhat higher than those on hand prior to the past three years. Additional monies for investment made possible the use of longer maturities, with higher yields.

Section 2. Purchases and Sales of Short-Term Corporate Notes

The use of short-term corporate notes of prime quality has increased since 1969 legislation authorized a broader use of these securities in many of the State funds; purchases and sales doubled in volume during fiscal 1974, increased by an additional 50% in fiscal 1975, remained stable during fiscal 1976, and were reduced by 30% during 1977. The financial condition of corporations is now somewhat better than in 1974; therefore, issuing firms find it unnecessary to pay the previous "premium" for these funds. Because of this factor, the State uses U.S. Government repurchase agreements to a greater extent at a somewhat higher yield. The investment department uses corporate notes of only well-known, marketable names. There are agreements with the vendors that they will repurchase the notes if the State needs cash. These credit instruments have the advantage of complete flexibility as to maturity, combined with a very fine degree of service offered by the companies issuing these securities.

Section 3. Purchases of U.S. Government-Guaranteed Obligations

Beginning in early 1970, the Government National Mortgage Association approved a program whereby major mortgage bankers could issue securities representing groups of mortgages and backed by the full faith and credit of the U.S. Government. Minnesota's investment department had worked closely with IDS Mortgage Corporation in explaining to the Department of Housing and Urban Development the need for this type of security in funds such as Minnesota's Permanent School Fund — a portion of which must be invested in government obligations under Constitutional provisions. After lengthy negotiations, the Treasury Department approved these securities late in 1969. They have been used in the Permanent School Fund since that time during periods of attractive yields. During the past five fiscal years, commitments have been made in the Minnesota Adjustable Fixed Benefit Fund; shorter maturities have been purchased for the highway trust funds. During fiscal 1977, Government National Mortgage Association certificates were used in the larger basic retirement funds; they offered a yield somewhat higher than that obtainable through corporate bond investments of lesser quality. During recent years, most of these certificates have been purchased on the open market at the lowest offering price as of the time of commitment.

The only purchase of Merchant Marine (Title XI) bonds, guaranteed in full by the United States Government, during 1977 was in an instance in which the State already owned a substantial quantity of an issue. There may be certain price benefits from additional commitments in this security at the time these bonds are called for "sinking fund" purposes.

A third type of United States Government-guaranteed obligation used during fiscal 1977 consisted of securities guaranteed by the Small Business Administration. Under a procedure developed in cooperation with the Minnesota Banker's Association, the bank handling such loans retains the 10% not guaranteed by the United States Government and sells the remaining 90% to the State Board of Investment. The Summit State Bank of Richfield, Minnesota, has been designated as the organization to pool the various loans placed by Minnesota banks.

Section 4. Private Placements of Fixed-Income Securities

Certain fixed-income issues of leading national corporations, other than bonds offered to the general public, are used by the investment department if they have received a rating of "A" or better by a recognized service and have met definite statutory requirements. Because of the quality and size of these issues, their value is ascertainable from current market conditions and a degree of marketability is assured. Such transactions must be completed through the investment firms handling the issue for the particular corporation desiring the funds. In order to avoid being the sole determinant as to interest rate, the investment department has followed the policy of purchasing only a portion of an individual issue, with other recognized institutional buyers participating at the same price and interest rate. Private placements are used only if there appears to be an adequate spread in interest rates between such securities and bonds available on the open market. This differential has varied considerably during the past few years. Private placements purchased during the 1960's were found to be particularly advantageous during the periods of high interest rates since 1970 in that the pro-rata sinking fund provisions resulted in a portion of these securities being retired by the issuer at face value. The amounts received from these mandatory prepayments were far in excess of the market values of bonds with similar coupons.

Section 5. Fixed-Income Obligations Purchased at Time of Offering on a Designated Basis

Bonds in the amounts indicated were bought at the time of offering when the issues were readily available from members of the syndicate. The orders were placed only with those firms that assumed the underwriting risk and held the bonds. The largest individual order was placed with the managing underwriter in those cases when this particular firm had sufficient bonds available; this syndicate leader was asked to provide the billings and deliveries for all members of the underwriting group.

There have been requests from several securities firms to be included in bond purchases made at the time of original offering because of participation in a "selling group". Such participation simply signifies that the firm would receive a portion of the commission on the bonds sold through the State's order even though such firm assumes no part of the underwriting risk. Because Minnesota's accounts have benefited greatly through the services offered by underwriters at a time when bond issues have been "tight" — with the new issues difficult to obtain — it is felt to be very unfair to allocate profits to firms not taking the underwriting risk at a time when bonds are easy to obtain.

As this is being written in late 1977, certain adjustments are being made in purchase policies for fixed-income obligations because of renewed interest in bond investments. The comparatively low level of stock commissions, due to "discounts" by various firms, has resulted in a portion of the general economic and equity research information being paid through orders for new issues of corporate bonds. To an increased degree, the original underwriters of bond issues are willing to "designate" commissions on a portion of such sales to their research departments for the general service provided to institutional customers.

Section 6. Fixed-Income Obligations Purchased at or after Time of Offering through Dealers Having Bonds Available

This schedule includes a listing of orders for bonds placed on the basis of availability, with consideration, when possible, of the factors mentioned previously. In certain instances, such purchases were of issues in great demand by institutional investors; in other cases, the decision to buy the bonds was made after a large portion had been sold by the members of the syndicate. These transactions were completed on the basis of offerings to our department or through firms known to have unsold balances of the issues involved.

The investment staff is particularly appreciative of the attempts by leading underwriters to obtain bonds for the State accounts at the times certain new issues, in great demand, were sold to investors.

Section 7. Corporate Bonds Purchased through Secondary Offerings

The investment department has purchased bonds on the secondary market in recent years for various reasons, usually as additions to previous commitments. These purchases were completed by calling several dealers, practically always including the manager of the original syndicate, those firms known to position the issue, and organizations likely to maintain a market for the securities. The purchases were made at the best price.

Section 8. Sale of Fixed-Income Securities

A substantial number of corporate bonds was sold from the retirement funds during the past eight years. In the early 1970's, sales consisted of small holdings inherited into the various funds. During the past two fiscal years, certain convertible debenture issues have been sold in an effort to increase portfolio quality. Certificates issued by the Government National Mortgage Association and Canadian provincial obligations were sold during the 1977 fiscal year to take advantage of attractive prices and to balance portfolio maturities. Although it is unlikely that the State Board of Investment will engage actively in bond trading for small theoretical income advantages, it is apparent that there are attractive opportunities for significant portfolio improvements through exchanges of fixed-income obligations.

Section 9. Common Stock Purchases Allocated by Investment Department

Until May 1, 1975, stock purchases completed through a major exchange, or at the time of a secondary distribution, were allocated on the basis of service received by the investment department. Those firms providing the most useful research material or, to a lesser extent, the investment bankers furnishing attractive private placements of fixed-income securities and bonds in appropriate quantities

received favorable consideration. As has been previously indicated, the department also allocated stock orders to those firms providing specialized services in the fields of portfolio comparisons and in computer applications helpful for research and listings of security holdings. During fiscal 1977, negotiations and "competitive bidding" completed with several firms resulted in particular payments for various research and performance measurement services.

The introductory paragraphs of this memorandum regarding the distribution of brokerage business indicated that any placement of securities orders on the basis of "service" or "research" leads to inequities in the case of public funds. Due to time and staff limitations, we have found it necessary to be dependent primarily upon the reports from those firms which have provided particularly valuable information over the years. During the 1969-77 period, there were many personnel changes in brokerage and investment banking organizations. It was often difficult to determine whether the research and investment service had been due to the individual or the general quality of the firm. The continuing mergers and consolidations of investment firms cause ever-increasing problems as competent representatives of several former competitors find themselves working for one organization.

Representatives of several outstanding firms have suggested that their research be used to a greater extent; however, it is impossible for us to use the volume of written materials presented to us. We feel it may be inappropriate to compensate for this material with securities orders when we do not have the procedural flexibility, nor statutory or Board approval to use many of the issues advocated. Nevertheless, written research materials and discussions with analysts have been most beneficial.

The value of certain telephone calls regarding future securities offerings, current earnings, up-to-the-minute financial news and continuing order solicitations is definitely questioned by the Executive Secretary and the investment staff. The legislature has appropriated funds for the necessary electronic equipment to provide current market data and information regarding securities. As a whole, the market price of the stocks owned in the State's accounts is little affected by minor changes in earnings estimates or actual earnings amounting to only a few cents a share. Even in the instance of more significant developments, it is doubtful whether the accounts could either buy or sell — quickly — in quantities which could make any difference to the overall investment performance.

It has been our continuing hope that we could reduce the number of firms with whom we conduct stock transactions. Not only would records be simplified, but we would be able to concentrate our business with organizations which have demonstrated their effectiveness in working with us. Because of the State's needs for specialized information and service in many fields, however, the list of dealers handling State transactions will continue to be longer than that deemed appropriate by most private funds. The size of the investment department staff has increased in recent years; therefore, it was logical that individuals, with new preferences as to analysts and research departments, requested that even more firms receive a portion of the department's securities business. It appears appropriate that the department deal primarily with those firms which have serviced the State accounts for substantial periods of years and through which specific "soft dollar" services are received. During the past three years, an attempt has been made to concentrate research commission dollars with firms which have serviced the State account in a particularly meaningful manner over the many years since the common stock program was initiated.

In certain instances, it is noted that many individual securities firms provide stocks to the State accounts. In the case of the Minnesota Power and Light Company common stock, for example, purchases during fiscal 1977 were completed through thirty different securities organizations. This was because of two new offerings of the stock, as the company needed new funds for expansion purposes. The investment department tries to divide these orders among a number of firms because of the somewhat higher commissions applicable to the underwriters. The largest orders are usually placed with the managers of such issues; these higher commissions are considered in the distribution of other securities business throughout the year.

It has been previously indicated in this report that "negotiated rates" is a misnomer. It is not known whether or not the execution was well handled until after the order is completed. At that point, there is only one firm with which the customer can negotiate. It would appear illogical for a State to negotiate "harder" with one firm than another. It is probable that difficulties could be encountered if rates negotiated for transactions related to one of the many funds handled by the investment board were

lower than those applicable to other funds. Although some firms have offered to complete sizable transactions for only nominal amounts, it is apparent that future higher commissions are anticipated in order to pay for such services.

It must be emphasized, however, that significant research and securities information is worth more than the saving of all or a portion of a commission. The interest in "negotiated rates" and net prices seems to be unrealistic if investors try to save a fraction of one per cent of the price of securities in the commission rate while discounting the value of advice through research that could lead to very substantial appreciation in the securities purchased — or, just as important, the minimizing of losses.

Therefore, the investment department is continuing to distribute securities orders on the basis of service received. At the time of this writing, firms which are members of the New York Stock Exchange — and other major exchanges — are requested to complete the transactions at commission rates lower than those in effect prior to May 1, 1975, by 45%. It appears that such a "standard reduction" is typical within the industry. Total annual commissions are limited to the amounts believed appropriate for the research materials and services gained by the department.

During the summers of 1976 and 1977, investment personnel visited the research departments of several firms with Minnesota offices. These New York interviews revealed a high degree of competence on the part of analysts and research personnel. The extreme turnover evidenced by many research departments during the past three years, however, has made it somewhat difficult for any institutional investor to maintain a set list of firms with which transactions are completed. It is apparent that the department's analysts and portfolio managers will still find it necessary to maintain contacts with and receive information from analysts in firms throughout North America. There will be an even greater attempt by department personnel, however, to use the research services available through the larger securities organizations which have Minnesota offices.

Section 10. Common Stock Purchases Placed on the Basis of Lowest Available Price — in Instances of Over-the-Counter Securities, on the "Third Market", or through Direct Dealings with Other Institutions

During recent years, no purchases nor sales were made of over-the-counter stocks until the offerings and bids had been checked with two or more dealers. We attempted to contact organizations specializing in the particular stocks to be bought.

Substantial blocks of stocks were purchased from several large firms that buy and sell securities at a net price. This usually results in a definite saving to the customer when compared with the latest quotations on the major exchanges, including the standard commissions. The off-board, or "third market", has proven to be very helpful, especially in obtaining stocks that show comparatively low trading activity on the major exchanges. Prior to "May Day" 1975, our experience over one decade indicated that net commission savings on "third market" transactions approximated $\frac{3}{8}$ to $\frac{1}{2}$ of a point per share, or \$375 to \$500 per thousand shares. During the past 30 months, the department has dealt, to a great degree, with stock exchange member firms because of the "soft dollar" commitments for various services and due to the lower commission rates. Although we continue to be very impressed with the ability of the "third market" organizations to provide well-known quality stocks at all times, it appears that leading members of the New York Stock Exchange are also attempting to make markets for various securities. The methods of trading stocks, prevalent until recent months, appear to be changing; the answers are not yet definitive. The "third market" appears to offer a competitive price and is often able to handle blocks of securities at a price more favorable than possible on a major stock exchange, even considering the discounts.

The apparent advantage still applicable to an off-board trade is that the entire transaction is completed with no appreciable effect on the price of the stock. Negotiations on such transactions may be completed before the actual trade. This is in marked contrast to the situation involving "negotiated rates" on the major stock exchanges — which may apply to a wide range of prices applicable to the various shares purchased or sold through one order.

It is not our intent to become unduly concerned with the relative merits of the major exchanges versus the "third market"; we are simply pointing out the advantages of using all recognized markets —

major exchanges, over-the-counter market, the "third market", and the "fourth market" (a direct meeting of buyers and sellers) — for the benefit of the State funds. In dealing with firms which are not members of major exchanges, all trades are handled on a competitive basis so that the comparative prices may be checked.

Since early 1970, the investment department has received the services of the AutEx organization, which provides detailed, current, televised information concerning blocks of stocks which may be of interest to us. Since 1973, the investment staff has also used the Institutional Networks Corporation in handling trades; this makes possible direct transactions between institutions and among other large holders of stocks — while withholding the identity of the buyers and sellers. Several very successful transactions have been completed through this system.

Section 11. Common Stock Sales

Sales of common stocks during fiscal 1977 were made primarily to balance the portfolio and to take advantage of what appeared to be attractive market prices. A portion of the more successful holdings, when relatively high priced, were sometimes sold for a profit to offset losses on other stocks. It is anticipated that this process of investment upgrading will continue in order to make the equity portfolio more appropriate for the purposes of the funds. The stocks listed were sold through the markets which appeared to be appropriate at the time of the transactions. When the "over-the-counter", "third market" or the "fourth market" were used, bids were checked so as to assure a proper price. Commission business was allocated as described for stock purchases.

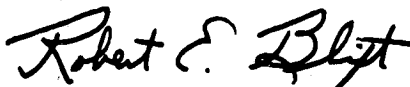

* * * * *

A favorable and equitable allocation of securities business has become increasingly difficult as financial difficulties have plagued the industry, especially as analysts have moved to different firms and have been replaced by sales personnel somewhat less attentive to the needs of State retirement and trust funds. Nevertheless, we are impressed with the progress of many leading securities organizations as to the quality of their research.

The members of the State Board of Investment, acting through the investment department, are trustees for the beneficiaries of the retirement funds, for the State's educational institutions, and for the people living in Minnesota. This responsibility continues to be recognized.

There are many possible equitable ways of allocating and dividing the State's securities business. It is felt, however, that the confidence of Minnesota citizens can be retained only if these orders are placed on a reasonable basis and if the ultimate good of the State is placed above all other considerations.

Respectfully submitted,

Robert E. Blixt, C.F.A.
Executive Secretary
